

EXP 4:

User Stories

Aim:

To capture the functional requirements of a software system from the end-user perspective by defining user stories with clear descriptions, acceptance criteria, priority, story points, and risk levels, thereby guiding iterative development and sprint planning.

Procedure:

1. Identify the key roles (actors) in the system such as CRM User, Sales Manager, and Sales Representative, and determine their primary goals and interactions with the system.
2. Write user stories in the standard format: "As a [role], I want [feature] so that [benefit]", ensuring each story is independent, testable, and delivers a specific business value.
3. Define acceptance criteria for each user story to specify the conditions that must be satisfied for the story to be considered complete and ready for testing.
4. Assign planning attributes including story points, priority level, and risk rating to each user story; log all stories in Azure DevOps Boards and capture snapshots of the work items.

Output:

The screenshot displays the Azure DevOps interface for a project named 'CRMREC'. The left sidebar shows the navigation menu with 'Work items' selected. The main area shows a 'USER STORY 1' titled '1 Secure User Login'. The story is in 'New' status, assigned to 'New' reason, and categorized under 'CRM' area and 'CRM' iteration. The description is: 'As a CRM User, I want to securely log in to the application so that my customer data remains protected.' The acceptance criteria are: '- Email and password fields are present on the login page.', '- Authentication is handled securely through the backend.', '- Invalid credentials display an appropriate error message.', and '- Successful login redirects the user to the Dashboard.' The planning attributes are: Story Points: 3, Priority: 1, Risk: 1 - High. The classification is 'Business'. The deployment section includes a link to 'Releases' and a note about deployment status reporting. The development section includes a link to 'Add link' and a note about linking an Azure Repos commit, pull request, or branch. The related work section is empty.

CRM

Description

As a CRM User, I want my session to persist across reloads so that I don't have to repeatedly log in during my workday.

Acceptance Criteria

- Auth tokens are securely stored (e.g., localStorage/cookies).

- Refreshing the page does not log the user out.

- Session automatically expires after a set period of inactivity.

Discussion

Add a comment. Use # to link a work item, @ to mention a person, or ! to link a pull request.

CRM

Description

As a Sales Manager, I want to view KPI cards and activity feeds on my dashboard so that I can quickly understand my team's performance health.

Acceptance Criteria

- Activity feed shows a chronological list of recent updates on leads and tasks.

- Data updates correctly upon page load.

Discussion

Add a comment. Use # to link a work item, @ to mention a person, or ! to link a pull request.

CRM

Description

As a Sales Manager, I want to see an overview of the pipeline with animated charts so that I can visualize current sales bottlenecks and trends.

Acceptance Criteria

- Visual charts (e.g., funnel chart, bar graphs) render on the dashboard.

- Charts contain smooth animations upon loading.

- Hovering over chart sections reveals detailed numerical data points.

Discussion

Add a comment. Use # to link a work item, @ to mention a person, or ! to link a pull request.

Updated by Abinav TL Friday

Details

Description

As a Sales Representative, I want to use a drag-and-drop Kanban board so that I can visually track and easily update the status of my leads.

Acceptance Criteria

- Pipeline displays columns for pipeline stages (e.g., Lead, Contacted, Qualified, Won).
- Leads are represented as drag-and-drop cards within the columns.
- Dropping a card in a new column successfully updates the lead's status in the database.

Discussion

Add a comment. Use # to link a work item, @ to mention a person, or ! to link a pull request.

Related Work

Result:

Five user stories were successfully documented in Azure DevOps Boards, covering Secure User Login, Session Persistence, Dashboard KPI Cards & Activity, Pipeline Overview Charts, and Kanban Board Deal Tracking, each with defined acceptance criteria, story points, priority, and risk classifications.
