

Aim:

To draw the activity diagram for the given problem statement.

Procedure:

1. Identify the process or workflow to be modeled.
2. Define the start point (initial node – filled circle).
3. Identify all activities/actions involved in the process.
4. Represent each activity using rounded rectangles.
5. Arrange activities in the logical sequence of execution.
6. Connect activities using arrows (control flows).
7. Add decision nodes (diamonds) for conditions or branching.

**Result:**

Thus, the activity diagram for the given problem statement has been drawn.
